This context is built from the following engraver(s):

**Section 2.2.1 [Accidental\_engraver], page 232**

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental. For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

*symbol*      The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in Internals Reference](#) then all staves share accidentals, and if *context* is [Section “Staff” in Internals Reference](#) then all voices in the same staff share accidentals, but staves do not.

*procedure*   The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

`context`      The current context to which the rule should be applied.

`pitch`        The pitch of the note to be evaluated.

`barnum`       The current bar number.

`measurepos`   The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (`#t` . `#f`) does not make sense.

`autoCautionaries` (list)

List similar to `autoAccidentals`, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**extraNatural** (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

**harmonicAccidentals** (boolean)

If set, harmonic notes in chords get accidentals.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental\_engraver**.

**keySignature** (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. **keySignature** = #`((6 .,FLAT)).

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Properties (write)

Context `MensuralStaff` can contain [Section 2.1.3 \[CueVoice\]](#), page 57 and [Section 2.1.16 \[MensuralVoice\]](#), page 132.

This context is built from the following engraver(s):

**[Section 2.2.1 \[Accidental\\_engraver\]](#), page 232**

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental. For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

*symbol*      The symbol is the name of the context in which the following rules are

to be applied. For example, if *context* is [Section “Score” in \*Internals Reference\*](#) then all staves share accidentals, and if *context* is [Section “Staff” in \*Internals Reference\*](#) then all voices in the same staff share accidentals, but staves do not.

*procedure* The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

**context** The current context to which the rule should be applied.

**pitch** The pitch of the note to be evaluated.

**barnum** The current bar number.

**measurepos** The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**extraNatural** (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

**harmonicAccidentals** (boolean)

If set, harmonic notes in chords get accidentals.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental\_engraver**.

**keySignature** (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* .

`step) . alter)`, where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #`((6 . ,FLAT))`.

`localKeySignature` (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain `((octave . name) . (alter barnumber . measureposition))` pairs.

Properties (write)

`localKeySignature` (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain `((octave . name) . (alter barnumber . measureposition))` pairs.

This context is built from the following engraver(s):

#### [Section 2.2.8 \[Bar\\_number\\_engraver\]](#), page 235

A bar number is created whenever `measurePosition` is zero and when there is a bar line (i.e., when `whichBar` is set). It is put on top of all staves, and appears only at the left side of the staff. The staves are taken from `stavesFound`, which is maintained by [Section 2.2.107 \[Staff\\_collecting\\_engraver\]](#), page 267.

Properties (read)

`barNumberVisibility` (procedure)

A Procedure that takes an integer and returns whether the corresponding bar number should be printed.

`currentBarNumber` (integer)

Contains the current barnumber. This property is incremented at every bar line.

`stavesFound` (list of grobs)

A list of all staff-symbols found.

`whichBar` (string)

This property is read to determine what type of bar line to create.

Example:

```
\set Staff.whichBar = "|:"
```

This will create a start-repeat bar in this staff only. Valid values are described in [Section “bar-line-interface”](#) in *Internals Reference*.

This engraver creates the following layout object(s):

[Section 3.1.12 \[BarNumber\]](#), page 296.

#### [Section 2.2.13 \[Break\\_align\\_engraver\]](#), page 237

Align grobs with corresponding `break-align-symbols` into groups, and order the groups according to `breakAlignOrder`. The left edge of the alignment gets a separate group, with a symbol `left-edge`.

This engraver creates the following layout object(s):

Section 3.1.21 [BreakAlignGroup], page 302, Section 3.1.22 [BreakAlignment], page 303 and Section 3.1.58 [LeftEdge], page 336.

**Section 2.2.25 [Default\_bar\_line\_engraver], page 241**

This engraver determines what kind of automatic bar lines should be produced, and sets `whichBar` accordingly. It should be at the same level as Section 2.2.124 [Timing\_translator], page 272.

Properties (read)

`automaticBars` (boolean)

If set to false then bar lines will not be printed automatically; they must be explicitly created with a `\bar` command. Unlike the `\cadenzaOn` keyword, measures are still counted. Bar line generation will resume according to that count if this property is unset.

`barAlways` (boolean)

If set to true a bar line is drawn after each note.

`defaultBarType` (string)

Set the default type of bar line. See `whichBar` for information on available bar types.

This variable is read by Section “Timing\_translator” in *Internals Reference* at Section “Score” in *Internals Reference* level.

`measureLength` (moment)

Length of one measure in the current time signature.

`measurePosition` (moment)

How much of the current measure have we had. This can be set manually to create incomplete measures.

`whichBar` (string)

This property is read to determine what type of bar line to create.

Example:

```
\set Staff.whichBar = "|:"
```

This will create a start-repeat bar in this staff only. Valid values are described in Section “bar-line-interface” in *Internals Reference*.

Properties (write)

`automaticBars` (boolean)

If set to false then bar lines will not be printed automatically; they must be explicitly created with a `\bar` command. Unlike the `\cadenzaOn` keyword, measures are still counted. Bar line generation will resume according to that count if this property is unset.

**Section 2.2.47 [Grace\_spacing\_engraver], page 249**

This engraver creates the following layout object(s):

**Section 3.1.46 [GraceSpacing], page 326.**

**Section 2.2.64 [Mark\_engraver], page 254**

Create **RehearsalMark** objects. It puts them on top of all staves (which is taken from the property **stavesFound**). If moving this engraver to a different context, **Section 2.2.107 [Staff\_collecting\_engraver], page 267** must move along, otherwise all marks end up on the same Y location.

Music types accepted:

**Section 1.2.34 [mark-event], page 42**

Properties (read)

**markFormatter** (procedure)

A procedure taking as arguments the context and the rehearsal mark. It should return the formatted mark as a markup object.

**rehearsalMark** (integer)

**stavesFound** (list of grobs)

A list of all staff-symbols found.

This engraver creates the following layout object(s):

**Section 3.1.85 [RehearsalMark], page 358.**

**Section 2.2.68 [Metronome\_mark\_engraver], page 255**

[Section 1.2.3 \[apply-output-event\], page 39](#)

[Section 2.2.80 \[Paper\\_column\\_engraver\], page 259](#)

Take care of generating columns.

This engraver decides whether a column is breakable. The default is that a column is always breakable. However, every **Bar\_engraver** that does not have a barline at a certain point will set **forbidBreaks** in the score context to stop line breaks. In practice, this means that you can make a break point by creating a bar line (assuming that there are no beams or notes that prevent a break point).

Music types accepted:

[Section 1.2.11 \[break-event\], page 40](#) and [Section 1.2.28 \[label-event\], page 42](#)

Properties (read)

**forbidBreak** (boolean)

If set to **##t**, prevent a line break at this point.

Properties (write)

**currentCommandColumn** (graphical (layout) object)

Grob that is X-parent to all current breakable (clef, key signature, etc.) items.

**currentMusicalColumn** (graphical (layout) object)

Grob that is X-parent to all non-breakable items (note heads, lyrics, etc.).

**forbidBreak** (boolean)

If set to **##t**, prevent a line break at this point.

This engraver creates the following layout object(s):

[Section 3.1.71 \[NonMusicalPaperColumn\], page 347](#) and [Section 3.1.79 \[PaperColumn\], page 353.](#)

[Section 2.2.81 \[Parenthesis\\_engraver\], page 260](#)

Parenthesize objects whose music cause has the **parenthesize** property.

This engraver creates the following layout object(s):

[Section 3.1.80 \[ParenthesesItem\], page 354.](#)

**Section 2.2.90 [Repeat\_acknowledge\_engraver], page 263**

`repeatCommands` (list)

This property is a list of commands of the form (list 'volta *x*), where *x* is a string or #f. 'end-repeat is also accepted as a command.

`whichBar` (string)

This property is read to determine what type of bar line to create.

Example:

```
\set Staff.whichBar = "|:"
```

This will create a start-repeat bar in this staff only. Valid values are described in [Section “bar-line-interface” in \*Internals Reference\*](#).

**Section 2.2.103 [Spacing\_engraver], page 266**

Context **Staff** can contain Section 2.1.3 [CueVoice], page 57 and Section 2.1.27 [Voice], page 219.

This context is built from the following engraver(s):

#### Section 2.2.1 [Accidental\_engraver], page 232

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at **Staff** level, but reads the settings for **Accidental** at **Voice** level, so you can `\override` them at **Voice**.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol* The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in \*Internals Reference\*](#) then all staves share accidentals, and if *context* is [Section “Staff” in \*Internals Reference\*](#) then all voices in the same staff share accidentals, but staves do not.

*procedure* The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

**context** The current context to which the rule should be applied.

**pitch** The pitch of the note to be evaluated.

**barnum** The current bar number.

**measurepos** The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**extraNatural** (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

**harmonicAccidentals** (boolean)

If set, harmonic notes in chords get accidentals.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental\_engraver**.

**keySignature** (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #`((6 . ,FLAT))`.

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *bar* *number* . *measureposition*)) pairs.

Properties (write)

Context `VaticanaStaff` can contain Section 2.1.3 [CueVoice], page 57 and Section 2.1.26 [VaticanaVoice], page 206.

This context is built from the following engraver(s):

**Section 2.2.1 [Accidental\_engraver], page 232**

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can \override them at Voice.

Properties (read)

**autoAccidentals** (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol*      The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is **Section “Score” in Internals Reference** then all staves share accidentals, and if *context* is **Section “Staff” in Internals Reference** then all voices in the same staff share accidentals, but staves do not.

*procedure*   The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

**context**      The current context to which the rule should be applied.

**pitch**        The pitch of the note to be evaluated.

**barnum**       The current bar number.

**measurepos**   The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**extraNatural** (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

**harmonicAccidentals** (boolean)

If set, harmonic notes in chords get accidentals.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental\_engraver**.

**keySignature** (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. **keySignature** = #`((6 .,FLAT)).

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Properties (write)

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

## 2.2 Engravers and Performers

See [Section “Modifying context plug-ins” in \*Notation Reference\*](#).

### 2.2.1 Accidental\_engraver

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol*     The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in \*Internals Reference\*](#) then all staves share accidentals, and if *context* is [Section “Staff” in \*Internals Reference\*](#) then all voices in the same staff share accidentals, but staves do not.

*procedure*   The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

`context`     The current context to which the rule should be applied.

`pitch`       The pitch of the note to be evaluated.

`barnum`      The current bar number.

`measurepos`

The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (`#t . #f`) does not make sense.

`autoCautionaries` (list)

List similar to `autoAccidentals`, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

`extraNatural` (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

`harmonicAccidentals` (boolean)

If set, harmonic notes in chords get accidentals.

`internalBarNumber` (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the `Accidental_engraver`.

**keySignature** (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #'((6 . ,FLAT))`.

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Properties (write)

**localKeySignature** (list)

## 2.3 Tunable context properties

**aDueText** (markup)

**alignBelowContext** (string)

Where to insert newly created context in vertical alignment.

**associatedVoice** (string)

Name of the **Voice** that has the melody for this **Lyrics** line.

**autoAccidentals** (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol*     The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is **Section “Score” in *Internals Reference*** then all staves share accidentals, and if *context* is **Section “Staff” in *Internals Reference*** then all voices in the same staff share accidentals, but staves do not.

*procedure*   The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

**context**     The current context to which the rule should be applied.

**pitch**       The pitch of the note to be evaluated.

**barnum**      The current bar number.

**measurepos**

The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoBeamCheck** (procedure)

A procedure taking three arguments, *context*, *dir* [start/stop (-1 or 1)], and *test* [shortest note in the beam]. A non-**#f** return value starts or stops the auto beam.

**autoBeaming** (boolean)

If set to true then beams are generated automatically.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**automaticBars** (boolean)

If set to false then bar lines will not be printed automatically; they must be explicitly created with a **\bar** command. Unlike the **\cadenzaOn** keyword, measures are still

counted. Bar line generation will resume according to that count if this property is unset.

**barAlways** (boolean)

If set to true a bar line is drawn after each note.

**barCheckSynchronize** (boolean)

If true then reset **measurePosition** when finding a bar check.

**barNumberVisibility** (procedure)

A Procedure that takes an integer and returns whether the corresponding bar number should be printed.

**baseMoment** (moment)

Smallest unit of time that will stand on its own as a subdivided section.

**bassFigureFormatFunction** (procedure)

A procedure that is called to produce the formatting for a **BassFigure** grob. It takes a list of **BassFigureEvents**, a context, and the grob to format.

1

If `side-axis` is 0 (or `#X`), then this property determines whether the object is placed `#LEFT`, `#CENTER` or `#RIGHT` with respect to the other object. Otherwise, it determines whether the object is placed `#UP`, `#CENTER` or `#DOWN`. Numerical values may also be used: `#UP=1`, `#DOWN=-1`, `#LEFT=-1`, `#RIGHT=1`, `#CENTER=0`.

`extra-spacing-width` (pair of numbers):

`'(+inf.0 . -inf.0)`

In the horizontal spacing problem, we pad each item by this amount (by adding the ‘car’ on the left side of the item and adding the ‘cdr’ on the right side of the item). In order to make a grob take up no horizontal space at all, set this to `(+inf.0 . -inf.0)`.

`font-size` (number):

2

The font size, compared to the ‘normal’ size. 0 is style-sheet’s normal size, -1 is smaller, +1 is bigger. Each step of 1 is approximately 12% larger; 6 steps are exactly a factor 2 larger. Fractional values are allowed.

`non-musical` (boolean):

`#t`

True if the grob belongs to a `NonMusicalPaperColumn`.

`outside-staff-priority` (number):

0.8

Add this much extra space between objects that are next to each other.

`self-alignment-X` (number):

### 3.1.99 StaffGrouper

StaffGrouper objects are not created by any engraver.

Standard settings:

**staff-staff-spacing** (list):  
 '((basic-distance . 9) (minimum-distance . 7) (padding . 1)  
 (stretchability . 5))

When applied to a staff-group's `StaffGrouper` grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's `VerticalAxisGroup` grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the `StaffGrouper` grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.

- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.
- **stretchability** – a unitless measure of the dimension’s relative propensity to stretch. If zero, the distance will not stretch (unless collisions would result).

**staffgroup-staff-spacing** (list):

```
'((basic-distance . 10.5) (minimum-distance . 8) (padding .
1) (stretchability . 9))
```

The spacing alist controlling the distance between the last staff of the current staff-group and the staff just below it in the same system, even if one or more non-staff lines exist between the two staves. If the **staff-staff-spacing** property of the staff’s **VerticalAxisGroup** grob is set, that is used instead. See **staff-staff-spacing** for a description of the alist structure.

This object supports the following interface(s): [Section 3.2.42 \[grob-interface\]](#), page 422, [Section 3.2.100 \[spanner-interface\]](#), page 454 and [Section 3.2.101 \[staff-grouper-interface\]](#), page 455.

A pair of numbers. The first number specifies the default length of a beamlet that sticks out of the left hand side of this stem; the second number specifies the default length of the beamlet to the right. The actual length of a beamlet is determined by taking either the default length or the length specified by **beamlet-max-length-proportion**, whichever is smaller.

**flag** (stencil):

`ly:stem::calc-flag`

A function returning the full flag stencil for the **Stem**, which is passed to the function as the only argument. The default `ly:stem::calc-stencil` function uses the **flag-style** property to determine the correct glyph

**direction** (direction):

`0`

Otherwise, it determines whether the object is placed `#UP`, `#CENTER` or `#DOWN`. Numerical values may also be used: `#UP=1`, `#DOWN=-1`, `#LEFT=-1`, `#RIGHT=1`, `#CENTER=0`.

**duration-log** (integer):

`font-size` (number):

`-2`

Method of handling slur collisions. Choices are `inside`, `outside`, `around`, and `ignore`. `inside` adjusts the slur if needed to keep the grob inside the slur. `outside` moves the grob vertically to the outside of the slur. `around` moves the grob vertically to the outside of the slur only if there is a collision. `ignore` does not move either. `direction` (direction):

`-1`

If `side-axis` is 0 (or `#X`), then this property determines whether the object is placed `#LEFT`, `#CENTER` or `#RIGHT` with respect to the other object. Otherwise, it determines whether the object is placed `#UP`, `#CENTER` or

Standard settings:

```
avoid-slur (symbol):
  'inside
  Method of handling slur collisions. Choices are inside, outside,
around, and ignore. inside adjusts the slur if needed to keep the
grob inside the slur. outside moves the grob vertically to the outside
of the slur. around moves the grob vertically to the outside of the slur

 When applied to a staff-group's **StaffGrouper** grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's **VerticalAxisGroup** grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the **StaffGrouper** grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.

**nonstaff-relatedstaff-spacing** (list)

The spacing alist controlling the distance between the current non-staff line and the nearest staff in the direction of **staff-affinity**, if there are no non-staff lines between the two, and **staff-affinity** is either UP or DOWN. If **staff-affinity** is CENTER, then **nonstaff-relatedstaff-spacing** is used for the nearest staves on *both* sides, even if other non-staff lines appear between the current one and either of the staves. See **staff-staff-spacing** for a description of the alist structure.

**nonstaff-unrelatedstaff-spacing** (list)

The spacing alist controlling the distance between the current non-staff line and the nearest staff in the opposite direction from **staff-affinity**, if there are no other non-staff lines between the two, and

**staff-affinity** is either **UP** or **DOWN**. See **staff-staff-spacing** for a description of the alist structure.

**staff-affinity** (direction)

The direction of the staff to use for spacing the current non-staff line. Choices are **UP**, **DOWN**, and **CENTER**. If **CENTER**, the non-staff line will be placed equidistant between the two nearest staves on either side, unless collisions or other spacing constraints prevent this. Setting **staff-affinity** for a staff causes it to be treated as a non-staff line. Setting **staff-affinity** to **#f** causes a non-staff line to be treated as a staff.

**staff-staff-spacing** (list)

When applied to a staff-group's **StaffGrouper** grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's **VerticalAxisGroup** grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the **StaffGrouper** grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.
- **stretchability** – a unitless measure of the dimension's relative propensity to stretch. If zero, the distance will not stretch (unless collisions would result).

**vertical-skylines** (pair of skylines)

Two skylines, one above and one below this grob.

CENTER will place it on the broken spanner that falls closest to the center of the length of the entire spanner, although this behavior is unpredictable in situations with lots of rhythmic diversity. For predictable results, use LEFT and RIGHT.

This grob interface is used in the following graphical object(s): [Section 3.1.10 \[BalloonTextItem\]](#), page 294, [Section 3.1.42 \[FootnoteItem\]](#), page 322 and [Section 3.1.43 \[FootnoteSpanner\]](#), page 323.

### 3.2.9 bar-line-interface

Bar line.

Print a special bar symbol. It replaces the regular bar symbol with a special symbol. The argument *bartype* is a string which specifies the kind of bar line to print. Options are |, :|, |: , |:|, |:|: , |:|: , ., ||, |., .|, .|., |.|, :, **dashed**, ' and **S**.

These produce, respectively, a normal bar line, a right repeat, a left repeat, a thick double repeat, a thin-thick-thin double repeat, a thin-thick double repeat, a thick bar, a double bar, a start bar, an end bar, a thick double bar, a thin-thick-thin bar, a dotted bar, a dashed bar, a tick as bar line and a segno bar.

In addition, there is an option ||: which is equivalent to |: except at line breaks, where it produces a double bar (||) at the end of the line and a repeat sign (|:) at the beginning of the new line.

For segno, **S** produces a segno sign except at line breaks, where it produces a double bar (||) at the end of the line and a segno sign at the beginning of the new line. |**S** is equivalent to **S** but produces a simple bar line (|) instead of a double bar line (||) at line breaks. **S**| produces the segno sign at line breaks and starts the following line without special bar lines.

**S**|: and |:|**S** are used for repeat/segno combinations that are separated at line breaks. Alternatively, .**S**|: and |:|**S**. may be used which combine repeat signs and segno at the same line in case of a line break. |:|**S**|: is a combination of a left repeat (:|), a segno (**S**) and a right repeat |: which splits before the segno at line breaks; |:|**S**.|: splits after the segno sign.

If *bartype* is set to **empty** then nothing is printed, but a line break is allowed at that spot.

*gap* is used for the gaps in dashed bar lines.

### 3.2.15 break-aligned-interface

Items that are aligned in prefatory matter.

The spacing of these items is controlled by the `space-alist` property. It contains a list `break-align-symbols` with a specification of the associated space. The space specification can be

`(minimum-space . spc)`

Pad space until the distance is `spc`.

`(fixed-space . spc)`

Set a fixed space.

`(semi-fixed-space . spc)`

Set a space. Half of it is fixed and half is stretchable. (does not work at start of line. `fixme`)

`(extra-space . spc)`

Add `spc` amount of space.

Special keys for the alist are `first-note` and `next-note`, signifying the first note on a line, and the next note halfway a line.

Rules for this spacing are much more complicated than this. See [Wanske] page 126–134, [Ross] page 143–147.

#### User settable properties:

**break-align-anchor** (number)

For example, clefs are put after key signatures by setting

```
\override Score.BreakAlignment #'break-align-orders =
  #(make-vector 3 '(span-bar
                    breathing-sign
                    staff-bar

                    time-signature))
```

### 3.2.41 grid-point-interface

A spanning point for grid lines.

This grob interface is used in the following graphical object(s): [Section 3.1.48 \[GridPoint\]](#), [page 327](#).

### 3.2.42 grob-interface

A grob represents a piece of music notation.

All grobs have an X and Y position on the page. These X and Y positions are stored in a relative format, thus they can easily be combined by stacking them, hanging one grob to the side of another, or coupling them into grouping objects.

Each grob has a reference point (a.k.a. parent): The position of a grob is stored relative to that reference point. For example, the X reference point of a staccato dot usually is the note head that it applies to. When the note head is moved, the staccato dot moves along automatically.

A grob is often associated with a symbol, but some grobs do not print any symbols. They take care of grouping objects. For example, there is a separate grob that stacks staves vertically. The [Section 3.1.72 \[NoteCollision\]](#), [page 348](#) object is also an abstract grob: It only moves around chords, but doesn't print anything.

Grobs have properties (Scheme variables) that can be read and set. Two types of them exist: immutable and mutable. Immutable variables define the default style and behavior. They are shared between many objects. They can be changed using `\override` and `\revert`. Mutable properties are variables that are specific to one grob. Typically, lists of other objects, or results from computations are stored in mutable properties. In particular, every call to `ly:grob-set-property!` (or its C++ equivalent) sets a mutable property.

The properties `after-line-breaking` and `before-line-breaking` are dummies that are not user-serviceable.

#### User settable properties:

**X-extent** (pair of numbers)  
Hard coded extent in X direction.

**X-offset** (number)  
The horizontal amount that this object is moved relative to its X-parent.

**Y-extent** (pair of numbers)  
Hard coded extent in Y direction.

- Y-offset** (number)  
The vertical amount that this object is moved relative to its Y-parent.
- after-line-breaking** (boolean)  
Dummy property, used to trigger callback for **after-line-breaking**.
- avoid-slur** (symbol)  
Method of handling slur collisions. Choices are **inside**, **outside**, **around**, and **ignore**. **inside** adjusts the slur if needed to keep the grob inside the slur. **outside** moves the grob vertically to the outside of the slur. **around** moves the grob vertically to the outside of the slur only if there is a collision. **ignore** does not move either. In grobs whose notational significance depends on vertical position (such as accidentals, clefs, etc.), **outside** and **around** behave like **ignore**.
- before-line-breaking** (boolean)  
Dummy property, used to trigger a callback function.
- color** (color)  
The color of this grob.
- extra-X-extent** (pair of numbers)  
A grob is enlarged in X dimension by this much.
- extra-Y-extent** (pair of numbers)  
A grob is enlarged in Y dimension by this much.
- extra-offset** (pair of numbers)  
A pair representing an offset. This offset is added just before outputting the symbol, so the typesetting engine is completely oblivious to it. The values are measured in **staff-space** units of the staff's **StaffSymbol**.
- layer** (integer)  
An integer which determines the order of printing objects. Objects with the lowest value of layer are drawn first, then objects with progressively higher values are drawn, so objects with higher values overwrite objects with lower values. By default most objects are assigned a layer value of 1.
- minimum-X-extent** (pair of numbers)  
Minimum size of an object in X dimension, measured in **staff-space** units.
- minimum-Y-extent** (pair of numbers)  
Minimum size of an object in Y dimension, measured in **staff-space** units.
- outside-staff-horizontal-padding** (number)  
By default, an outside-staff-object can be placed so that it is very close to another grob horizontally. If this property is set, the outside-staff-object is raised so that it is not so close to its neighbor.
- outside-staff-padding** (number)  
The padding to place between this grob and the staff when spacing according to **outside-staff-priority**.
- outside-staff-priority** (number)  
If set, the grob is positioned outside the staff in such a way as to avoid all collisions. In case of a potential collision, the grob with the smaller **outside-staff-priority** is closer to the staff.

- rotation** (list)  
Number of degrees to rotate this object, and what point to rotate around. For example, `#'(45 0 0)` rotates by 45 degrees around the center of this object.
- springs-and-rods** (boolean)  
Dummy variable for triggering spacing routines.
- stencil** (stencil)  
The symbol to print.
- transparent** (boolean)  
This makes the grob invisible.
- whiteout** (boolean)  
If true, the grob is printed over a white background to white-out underlying material, if the grob is visible. Usually `#f` by default.

### Internal properties:

- axis-group-parent-X** (graphical (layout) object)  
Containing X axis group.

Containing Y axis group.
- cause** (any type)  
Any kind of causation objects (i.e., music, or perhaps translator) that was the cause for this grob.
- cross-staff** (boolean)  
For a beam or a stem, this is true if we depend on inter-staff spacing.
- interfaces** (list)  
A list of symbols indicating the interfaces supported by this object. It is initialized from the `meta` field.
- meta** (list) Provide meta information. It is an alist with the entries `name` and `interfaces`.
- pure-Y-offset-in-progress** (boolean)

### 3.2.48 item-interface

Grobs can be distinguished in their role in the horizontal spacing. Many grobs define constraints on the spacing by their sizes, for example, note heads, clefs, stems, and all other symbols with a fixed shape. These grobs form a subtype called **Item**.

Some items need special treatment for line breaking. For example, a clef is normally only printed at the start of a line (i.e., after a line break). To model this, ‘breakable’ items (clef, key signature, bar lines, etc.) are copied twice. Then we have three versions of each breakable item: one version if there is no line break, one version that is printed before the line break (at the end of a system), and one version that is printed after the line break.

Whether these versions are visible and take up space is determined by the outcome of the **break-visibility** grob property, which is a function taking a direction (-1, 0 or 1) as an argument. It returns a cons of booleans, signifying whether this grob should be transparent and have no extent.

The following variables for **break-visibility** are predefined:

grob will show:	before break	no break	after break
<b>all-invisible</b>	no	no	no
<b>begin-of-line-visible</b>	no	no	yes
<b>end-of-line-visible</b>	yes	no	no
<b>all-visible</b>	yes	yes	yes
<b>begin-of-line-invisible</b>	yes	yes	no
<b>end-of-line-invisible</b>	no	yes	yes
<b>center-invisible</b>	yes	no	yes

## User settable properties:

### `break-visibility` (vector)

A vector of 3 booleans, `#{end-of-line unbroken begin-of-line}`.  
`#t` means visible, `#f` means killed.

### `extra-spacing-height` (pair of numbers)

In the horizontal spacing problem, we increase the height of each item by this amount (by adding the ‘car’ to the bottom of the item and adding the ‘cdr’ to the top of the item). In order to make a grob infinitely high (to prevent the horizontal spacing problem from placing any other grobs above or below this grob), set this to `(-inf.0 . +inf.0)`.

### `extra-spacing-width` (pair of numbers)

In the horizontal spacing problem, we pad each item by this amount (by adding the ‘car’ on the left side of the item and adding the ‘cdr’ on the right side of the item). In order to make a grob take up no horizontal space at all, set this to `(+inf.0 . -inf.0)`.

### `non-musical` (boolean)

True if the grob belongs to a `NonMusicalPaperColumn`.

### 3.2.98 spacing-spanner-interface

The space taken by a note is dependent on its duration. Doubling a duration adds `spacing-increment` to the space. The most common shortest note gets `shortest-duration-space`. Notes that are even shorter are spaced proportional to their duration.

Typically, the increment is the width of a black note head. In a piece with lots of 8th notes, and some 16th notes, the eighth note gets a 2 note heads width (i.e., the space following a note is a 1 note head width). A 16th note is followed by 0.5 note head width. The quarter note is followed by 3 NHW, the half by 4 NHW, etc.

### User settable properties:

**average-spacing-wishes** (boolean)

If set, the spacing wishes are averaged over staves.

**base-shortest-duration** (moment)

Spacing is based on the shortest notes in a piece. Normally, pieces are spaced as if notes at least as short as this are present.

**common-shortest-duration** (moment)

The most common shortest note length. This is used in spacing. Enlarging this sets the score tighter.

**packed-spacing** (boolean)

If set, the notes are spaced as tightly as possible.

**shortest-duration-space** (dimension, in staff space)

Start with this much space for the shortest duration. This is expressed in **spacing-increment** as unit. See also [Section “spacing-spanner-interface” in \*Internals Reference\*](#).

**spacing-increment** (number)

Add this much space for a doubled duration. Typically, the width of a note head. See also [Section “spacing-spanner-interface” in \*Internals Reference\*](#).

**strict-grace-spacing** (boolean)

If set, main notes are spaced normally, then grace notes are put left of the musical columns for the main notes.

**strict-note-spacing** (boolean)

If set, unbroken columns with non-musical material (clefs, bar lines, etc.) are not spaced separately, but put before musical columns.

**uniform-stretching** (boolean)

If set, items stretch proportionally to their durations. This looks better in complex polyphonic patterns.

This grob interface is used in the following graphical object(s): [Section 3.1.97 \[SpacingSpanner\]](#), [page 367](#).

### 3.2.99 span-bar-interface

### 3.2.100 spanner-interface

Some objects are horizontally spanned between objects. For example, slurs, beams, ties, etc. These grobs form a subtype called **Spanner**. All spanners have two span points (these must be **Item** objects), one on the left and one on the right. The left bound is also the X reference point of the spanner.

#### User settable properties:

**normalized-endpoints** (pair)

Represents left and right placement over the total spanner, where the width of the spanner is normalized between 0 and 1.

**minimum-length** (dimension, in staff space)

Try to make a spanner at least this long, normally in the horizontal direction. This requires an appropriate callback for the **springs-and-rods** property. If added to a **Tie**, this sets the minimum distance between noteheads.

**to-barline** (boolean)

If true, the spanner will stop at the bar line just before it would otherwise stop.

This grob interface is used in the following graphical object(s): [Section 3.1.14 \[BassFigureAlignment\]](#), [page 298](#), [Section 3.1.15 \[BassFigureAlignmentPositioning\]](#), [page 298](#), [Section 3.1.17 \[BassFigureContinuation\]](#), [page 299](#), [Section 3.1.18 \[BassFigureLine\]](#), [page 300](#), [Section 3.1.19 \[Beam\]](#), [page 300](#), [Section 3.1.20 \[BendAfter\]](#), [page 302](#), [Section 3.1.26 \[ClusterSpanner\]](#), [page 307](#), [Section 3.1.37 \[DynamicLineSpanner\]](#), [page 316](#), [Section 3.1.39 \[DynamicTextSpanner\]](#), [page 319](#), [Section 3.1.40 \[Episema\]](#), [page 320](#), [Section 3.1.43 \[FootnoteSpanner\]](#), [page 323](#), [Section 3.1.45 \[Glissando\]](#), [page 325](#), [Section 3.1.46 \[GraceSpacing\]](#), [page 326](#), [Section 3.1.49 \[Hairpin\]](#), [page 328](#), [Section 3.1.50 \[HorizontalBracket\]](#), [page 329](#), [Section 3.1.51 \[InstrumentName\]](#), [page 330](#), [Section 3.1.57 \[LedgerLineSpanner\]](#), [page 335](#), [Section 3.1.59 \[LigatureBracket\]](#), [page 337](#), [Section 3.1.60 \[LyricExtender\]](#), [page 338](#), [Section 3.1.61 \[LyricHyphen\]](#), [page 338](#), [Section 3.1.62 \[LyricSpace\]](#), [page 339](#), [Section 3.1.64 \[MeasureGrouping\]](#), [page 341](#), [Section 3.1.66 \[MensuralLigature\]](#), [page 342](#), [Section 3.1.68 \[MultiMeasureRest\]](#), [page 344](#), [Section 3.1.69 \[MultiMeasureRestNumber\]](#), [page 345](#), [Section 3.1.70 \[MultiMeasureRestText\]](#), [page 346](#), [Section 3.1.78 \[OttavaBracket\]](#), [page 352](#), [Section 3.1.81 \[PercentRepeat\]](#), [page 354](#), [Section 3.1.82 \[PercentRepeatCounter\]](#), [page 355](#), [Section 3.1.83 \[PhrasingSlur\]](#), [page 356](#), [Section 3.1.84 \[PianoPedalBracket\]](#), [page 357](#), [Section 3.1.94 \[Slur\]](#), [page 364](#), [Section 3.1.96 \[SostenutoPedalLineSpanner\]](#), [page 366](#), [Section 3.1.97 \[SpacingSpanner\]](#), [page 367](#), [Section 3.1.99 \[StaffGrouper\]](#), [page 369](#),

### 3.2.101 staff-grouper-interface

A grob that collects staves together.

#### User settable properties:

##### **staff-staff-spacing** (list)

When applied to a staff-group's **StaffGrouper** grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's **VerticalAxisGroup** grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the **StaffGrouper** grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.

`beamlet-default-length` (pair)

A pair of numbers. The first number specifies the default length of a beamlet that sticks out of the left hand side of this stem; the second number specifies the default length of the beamlet to the right. Instructs the page breaker on whether to put a page break at this column. Can be **force** or **allow**.

**page-turn-penalty** (number)

**parenthesized** (boolean)

Parenthesize this grob.

**positions** (pair of numbers)

Pair of staff coordinates (*left* . *right*), where both *left* and *right* are in **staff-space** units of the current staff. For slurs, this value selects which slur candidate to use; if extreme positions are requested, the closest one is taken.

- prefer-dotted-right** (boolean)  
For note collisions, prefer to shift dotted up-note to the right, rather than shifting just the dot.
- ratio** (number)  
Parameter for slur shape. The higher this number, the quicker the slur attains its **height-limit**.
- remove-empty** (boolean)  
If set, remove group if it contains no interesting items.
- remove-first** (boolean)  
Remove the first staff of an orchestral score?
- restore-first** (boolean)

- same-direction-correction** (number)  
Optical correction amount for stems that are placed in tight configurations. This amount is used for stems with the same direction to compensate for note head to stem distance.
- script-priority** (number)  
A sorting key that determines in what order a script is within a stack of scripts.
- self-alignment-X** (number)  
Specify alignment of an object. The value `-1` means left aligned, `0` centered, and `1` right-aligned in X direction. Other numerical values may also be specified.
- self-alignment-Y** (number)  
Like **self-alignment-X** but for the Y axis.
- shorten-pair** (pair of numbers)  
The lengths to shorten a text-spanner on both sides, for example a pedal bracket. Positive values shorten the text-spanner, while negative values lengthen it.
- shortest-duration-space** (dimension, in staff space)  
Start with this much space for the shortest duration. This is expressed in **spacing-increment** as unit. See also [Section “spacing-spanner-interface” in \*Internals Reference\*](#).
- shortest-playing-duration** (moment)  
The duration of the shortest note playing here.
- shortest-starter-duration** (moment)  
The duration of the shortest note that starts here.
- side-axis** (number)

**side-relative-direction** (direction)

Multiply direction of **direction-source** with this to get the direction of this object.

**size** (number)

Size of object, relative to standard size.

**skyline-horizontal-padding** (number)

For determining the vertical distance between two staves, it is possible to have a configuration which would result in a tight interleaving of grobs from the top staff and the bottom staff. The larger this parameter is, the farther apart the staves are placed in such a configuration.

**skyline-vertical-padding** (number)

The amount by which the left and right skylines of a column are padded vertically, beyond the **Y-extents** and **extra-spacing-heights** of the constituent grobs in the column. Increase this to prevent interleaving of grobs from adjacent columns.

**slash-negative-kern** (number)

The space to remove between slashes in percent repeat glyphs. Larger values bring the two elements closer together.

**slope** (number)

The slope of this object.

**slur-padding** (number)

Extra distance between slur and script.

**space-alist** (list)

A table that specifies distances between prefatory items, like clef and time-signature. The format is an alist of spacing tuples: (*break-align-symbol type . distance*), where *type* can be the symbols **minimum-space** or **extra-space**.

**space-to-barline** (boolean)

If set, the distance between a note and the following non-musical column will be measured to the bar line instead of to the beginning of the non-musical column. If there is a clef change followed by a bar line, for example, this means that we will try to space the non-musical column as though the clef is not there.

**spacing-increment** (number)

Add this much space for a doubled duration. Typically, the width of a note head. See also [Section “spacing-spanner-interface” in \*Internals Reference\*](#).

**spacing-pair** (pair)

A pair of alignment symbols which set an object’s spacing relative to its left and right **BreakAlignments**.

For example, a **MultiMeasureRest** will ignore prefatory items at its bounds (i.e., clefs, key signatures and time signatures) using the following override:

```
\override MultiMeasureRest #'spacing-pair = #'(staff-bar . staff-bar)
```

**springs-and-rods** (boolean)

Dummy variable for triggering spacing routines.

**stacking-dir** (direction)

Stack objects in which direction?

**staff-affinity** (direction)

The direction of the staff to use for spacing the current non-staff line. Choices are UP, DOWN, and CENTER. If CENTER, the non-staff line will be placed equidistant between the two nearest staves on either side, unless collisions or other spacing constraints

prevent this. Setting **staff-affinity** for a staff causes it to be treated as a non-staff line. Setting **staff-affinity** to **#f** causes a non-staff line to be treated as a staff.

**staff-padding** (dimension, in staff space)

Maintain this much space between reference points and the staff. Its effect is to align objects of differing sizes (like the dynamics **p** and **f**) on their baselines.

**staff-position** (number)

Vertical position, measured in half staff spaces, counted from the middle line.

**staff-space** (dimension, in staff space)

Amount of space between staff lines, expressed in global **staff-space**.

**staff-staff-spacing** (list)

When applied to a staff-group's **StaffGrouper** grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's **VerticalAxisGroup** grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the **StaffGrouper** grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.
- **stretchability** – a unitless measure of the dimension's relative propensity to stretch. If zero, the distance will not stretch (unless collisions would result).

**staffgroup-staff-spacing** (list)

The spacing alist controlling the distance between the last staff of the current staff-group and the staff just below it in the same system, even if one or more non-staff lines exist between the two staves. If the **staff-staff-spacing** property of the staff's **VerticalAxisGroup** grob is set, that is used instead. See **staff-staff-spacing** for a description of the alist structure.

**stem-attachment** (pair of numbers)

An (*x* . *y*) pair where the stem attaches to the notehead.

**stem-end-position** (number)

Where does the stem end (the end is opposite to the support-head)?

**stem-spacing-correction** (number)

Optical correction amount for stems that are placed in tight configurations. For opposite directions, this amount is the correction for two normal sized stems that overlap completely.

**stemlet-length** (number)

How long should be a stem over a rest?

**stencil** (stencil)

The symbol to print.

**stencils** (list)

**strict-grace-spacing** (boolean)

If set, main notes are spaced normally, then grace notes are put left of the musical columns for the main notes.

**strict-note-spacing** (boolean)

If set, unbroken columns with non-musical material (clefs, bar lines, etc.) are not spaced separately, but put before musical columns.

**stroke-style** (string)

Set to "grace" to turn stroke through flag on.

**style** (symbol)

This setting determines in what style a grob is typeset. Valid choices depend on the **stencil** callback reading this property.

**text** (markup)

Text markup. See [Section “Formatting text” in \*Notation Reference\*](#).

**text-direction** (direction)

This controls the ordering of the words. The default **RIGHT** is for roman text. Arabic or Hebrew should use **LEFT**.

**thick-thickness** (number)

Bar line thickness, measured in **line-thickness**.

**thickness** (number)

Line thickness, generally measured in **line-thickness**.

**thin-kern** (number)

The space after a hair-line in a bar line.

**tie-configuration** (list)

List of (**position** . **dir**) pairs, indicating the desired tie configuration, where *position* is the offset from the center of the staff in staff space and *dir* indicates the direction of the tie (1=>up, -1=>down, 0=>center). A non-pair entry in the list causes the corresponding tie to be formatted automatically.

**to-barline** (boolean)

If true, the spanner will stop at the bar line just before it would otherwise stop.

**toward-stem-shift** (number)

Amount by which scripts are shifted toward the stem if their direction coincides with the stem direction. 0.0 means keep the default position (centered on the note head), 1.0 means centered on the stem. Interpolated values are possible.

**transparent** (boolean)

This makes the grob invisible.

**uniform-stretching** (boolean)

If set, items stretch proportionally to their durations. This looks better in complex polyphonic patterns.

**used** (boolean)

If set, this spacing column is kept in the spacing problem.
